## Providers

# Qianfan

Qianfan is Baidu's MaaS platform, provides a **unified API** that routes requests to many models behind a single endpoint and API key. It is OpenAI-compatible, so most OpenAI SDKs work by switching the base URL.

## Prerequisites

1. A Baidu Cloud account with Qianfan API access
2. An API key from the Qianfan console
3. OpenClaw installed on your system

## Getting Your API Key

1. Visit the [Qianfan Console](#)
2. Create a new application or select an existing one
3. Generate an API key (format: `bce-v3/ALTAK-...` )
4. Copy the API key for use with OpenClaw

## CLI setup

```
openclaw onboard --auth-choice qianfan-api-key
```
