Fresh from Discord

PR Review → Telegram Feedback

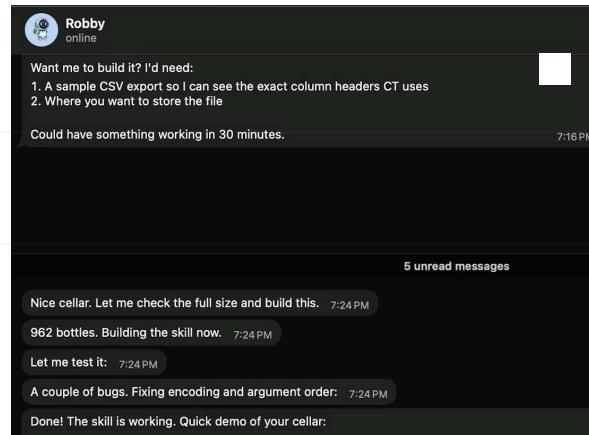

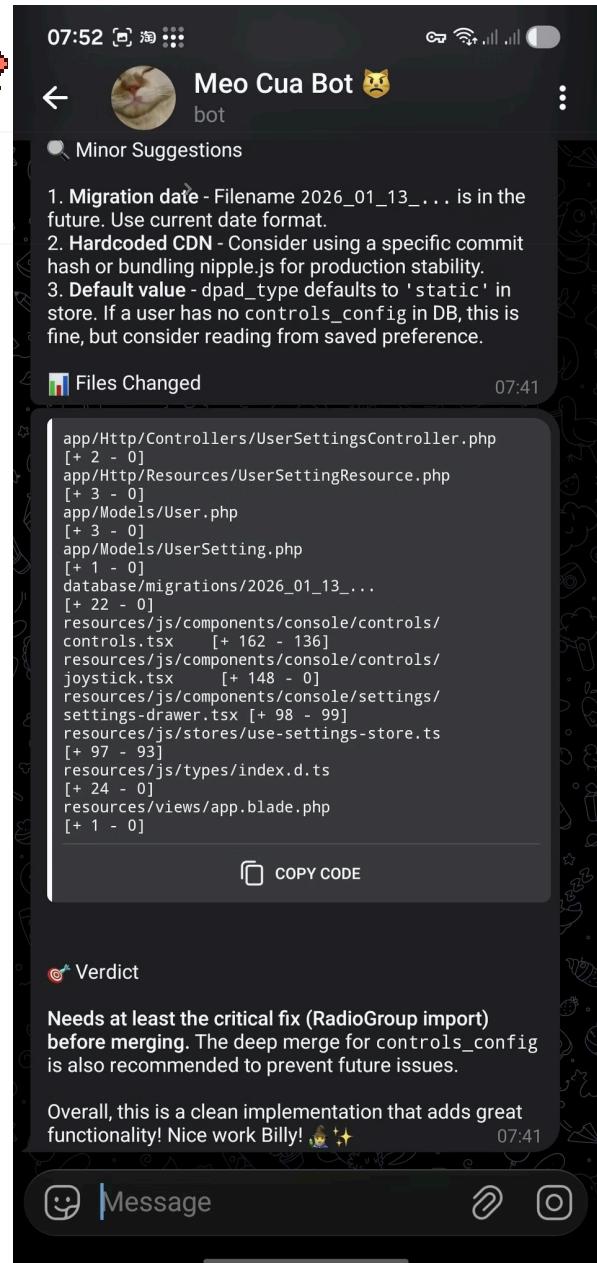

@bangnokia • review github telegram

OpenCode finishes the change
→ opens a PR → OpenClaw
reviews the diff and replies
in Telegram with “minor
suggestions” plus a clear
merge verdict (including
critical fixes to apply
first).

Wine Cellar Skill in Minutes

@prades_maxime • skills local csv

Asked “Robby” (@openclaw) for
a local wine cellar skill. It
requests a sample CSV export
+ where to store it, then
builds/tests the skill fast
(962 bottles in the example).

Tesco Shop Autopilot

@marchattonhere • automation
browser shopping

Weekly meal plan → regulars
→ book delivery slot →
confirm order. No APIs, just
browser control.

SNAG Screenshot-to-Markdown

@am-will • devtools
screenshots markdown

Hotkey a screen region →
Gemini vision → instant
Markdown in your clipboard.

Reply OK TO BOOK SLOT and I'll

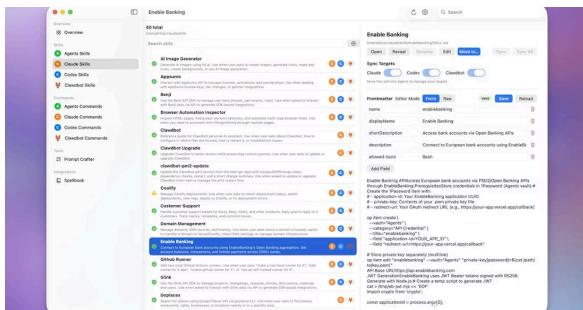

Showcase - OpenClaw

The image shows a screenshot of the Snag app's interface. On the left, a window titled "screengrab" displays a snippet of JavaScript code for extracting text from a screenshot. The code uses the "snag" library to capture a screenshot, extract text from it, and then write the text to the clipboard in various formats (HTML, JSON, plain text, etc.). On the right, a clipboard icon contains the extracted text "Hello World". A large blue arrow points from the screenshot window to the clipboard icon, illustrating the app's functionality. Below the screenshot window, the text "Effortless Screenshot Context Directly to Your Clipboard" is displayed.

Agents UI

@kitze • ui skills sync

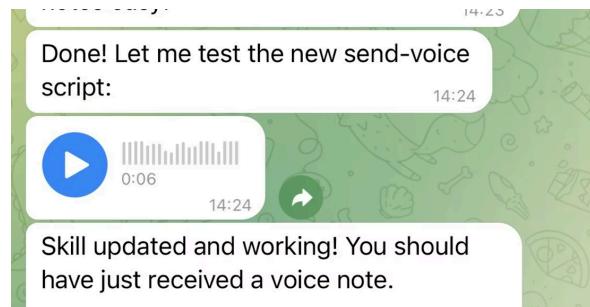

Desktop app to manage skills/commands across Agents, Claude, Codex, and OpenClaw.

Telegram Voice Notes (papla.media)

Community • voice tts
telegram

Wraps `papla.media` TTS and sends results as Telegram voice notes (no annoying autoplay).

CodexMonitor

@odrobnik • devtools codex
brew

Homebrew-installed helper to list/inspect/watch local OpenAI Codex sessions (CLI + VS Code).

Bamby 3D Printer Control

@tobiasbischoff • hardware
3d-printing skill

Control and troubleshoot
BambuLab printers: status,
jobs, camera, AMS,
calibration, and more.

 @odrobnik • v0.1.0

CodexMonitor

List/inspect/watch local OpenAI Codex sessions (CLI + VS Code) using the CodexMonitor

clawdhub.com/odrobnik/codexmonitor

 @tobiasbischoff • v1.0.0

Manage Bambu Labs 3D Printers...

Operate and troubleshoot BambuLab printers with the bambu-cli (status/watch, print start/pause/resume/stop...)

clawdhub.com/tobiasbischoff/bambu-cli

Vienna Transport (Wiener Linien)

@hjanuschka • travel
transport skill

Real-time departures,
disruptions, elevator status,
and routing for Vienna's
public transport.

 @hjanuschka • v1.0.0

Wiener Linien

Vienna public transport (Wiener Linien) real-time data. Use when asking about departures...

clawdhub.com/hjanuschka/wienerlinien

ParentPay School Meals

@George5562 • automation
browser parenting

Automated UK school meal booking via ParentPay. Uses mouse coordinates for reliable table cell clicking.

R2 Upload (Send Me My Files)

@julianengel • files r2
presigned-urls

Upload to Cloudflare R2/S3 and generate secure presigned download links. Perfect for remote OpenClaw instances.

iOS App via Telegram

@coard • ios xcode
testflight

Built a complete iOS app with maps and voice recording, deployed to TestFlight entirely via Telegram chat.

**Smiling through it all!
Can't believe this my
life**

Oura Ring Health Assistant

@AS • health oura calendar

Personal AI health assistant integrating Oura ring data with calendar, appointments, and gym schedule.

>

Kev's Dream Team (14+ Agents)

@adam91holt • multi-agent orchestration architecture manifesto

14+ agents under one gateway with Opus 4.5 orchestrator delegating to Codex workers.

Comprehensive technical write-up covering the Dream Team roster, model selection, sandboxing, webhooks, heartbeats, and delegation

🎯 FRED'S RECOMMENDATION:

You're at ***78% readiness*** — good enough for a productive day, but not 100%.

Morning (now → 12:00):

- You've got ~10 mins before your Lateral call
- Grab water, maybe a quick coffee
- Don't start anything heavy — protect your focus for the meeting

Afternoon:

- 4.5 hour gap between meetings — good deep work window
- Your deep sleep was excellent, so cognitive work should feel OK
- But you had 182 restless periods — might hit a wall around 3-4pm

flows. Clawdspace for agent sandboxing. [Blog post](#).

Linear CLI

@NessZerra • devtools linear
cli issues

CLI for Linear that integrates with agentic workflows (Claude Code, OpenClaw). Manage issues, projects, and workflows from the terminal. First external PR merged!

Beeper CLI

@jules • messaging beeper
cli automation

Read, send, and archive messages via Beeper Desktop. Uses Beeper local MCP API so agents can manage all your chats (iMessage, WhatsApp, etc.) in one place.

Automation & Workflows

Winix Air Purifier Control

@antonplex • automation
hardware air-quality

Claude Code discovered and confirmed the purifier controls, then OpenClaw takes over to manage room air quality.

```
Let me check all available control options.

● Bash(winixctl --help)
  _ usage: winixctl [-h] [--device DEVICE_SELECTOR]
    {login,refresh,devices,getstate,fan,power,mode,plasmawave} ...
    ... +17 lines (ctrl+o to expand)

● Bash(winixctl fan --help && echo "---" && winixctl mode --help)
  _ usage: winixctl fan [-h] {low,medium,high,turbo,sleep}

  positional arguments:
    ... +13 lines (ctrl+o to expand)

● Here's what we can control:

| Command             | Options                         |
|---------------------|---------------------------------|
| winixctl power      | on, off                         |
| winixctl fan        | low, medium, high, turbo, sleep |
| winixctl mode       | auto, manual                    |
| winixctl plasmawave | on, off                         |

Now for the automation - what schedule would you like? For example:
- Morning (7am): Turn on, medium fan
- Daytime (9am-5pm): Low fan while at work
- Evening (6pm): High fan during cooking/activity
- Night (10pm): Sleep mode
- Late night (12am): Turn off

What times and settings work for your routine?
Nice! as a test, can you set the fan to low?

● Bash(winixctl fan low)
  _ ok

● Done. Let me verify it changed.

● Bash(winixctl getstate)
  _          power : on
            mode : manual
            airflow : low
  ... +6 lines (ctrl+o to expand)

● Confirmed - airflow is now set to low. The API is working with your 5520.

Ready to set up your time-based automation whenever you share your preferred schedule.
```

Pretty Sky Camera Shots

@signalgaining • automation
camera skill images

Triggered by a roof camera: ask OpenClaw to snap a sky photo whenever it looks pretty – it designed a skill and took the shot.

Visual Morning Briefing Scene

@buddyhadry • automation
briefing images telegram

A scheduled prompt generates a single “scene” image each morning (weather, tasks, date, favorite post/quote) via a OpenClaw persona.

Playtomic availability checker + booking CLI. Never miss an open court again.

Accounting Intake

Community • automation email pdf

Collects PDFs from email, preps documents for tax consultant. Monthly accounting on autopilot.

Couch Potato Dev Mode

@davekiss • telegram website migration astro

Rebuilt entire personal site via Telegram while watching Netflix – Notion → Astro, 18 posts migrated, DNS to Cloudflare. Never opened a laptop.

Job Search Agent

@attol8 • automation api skill

Searches job listings, matches against CV keywords, and returns relevant opportunities with links. Built in 30 minutes using JSearch API.

Jira Skill Builder

@jdrhyne • automation jira skill devtools

OpenClaw connected to Jira, then generated a new skill on the fly (before it existed on ClawHub).

Todoist Skill via Telegram

 @iamsuhrajyoti • automation
todoist skill telegram

Automated Todoist tasks and had OpenClaw generate the skill directly in Telegram chat.

TradingView Analysis

@bheem1798 • finance browser
automation

Logs into TradingView via browser automation, screenshots charts, and performs technical analysis on demand. No API needed—just browser control.

Slack Auto-Support

@henrymascot • slack
automation support

Watches company Slack channel, responds helpfully, and forwards notifications to Telegram. Autonomously fixed a production bug in a deployed app without being asked.

 **Knowledge & Memory****xuezh Chinese Learning**

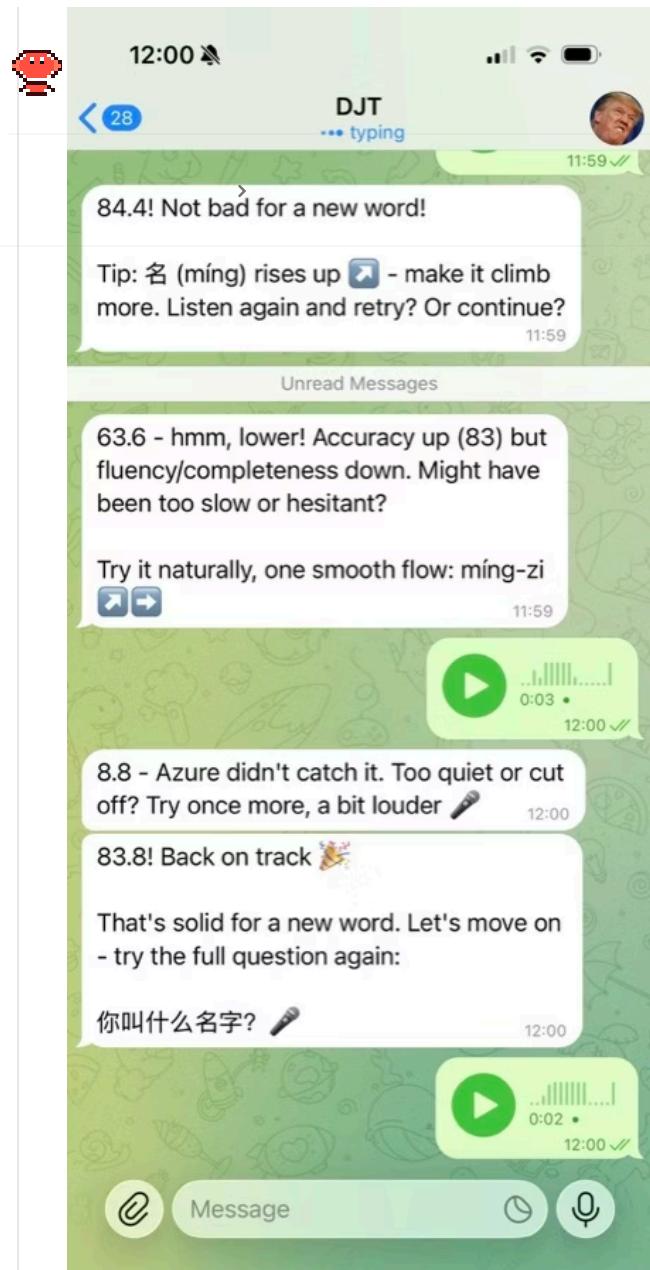

@joshp123 • learning voice
skill

Chinese learning engine with pronunciation feedback and study flows via OpenClaw.

WhatsApp Memory Vault

Community • memory
transcription indexing

Ingests full WhatsApp exports, transcribes 1k+ voice notes, cross-checks

with git logs, outputs linked markdown reports.

Karakeep Semantic Search

@jamesbrooksco • search
vector bookmarks

Adds vector search to Karakeep bookmarks using Qdrant + OpenAI/Ollama embeddings.

Inside-Out-2 Memory

Community • memory beliefs
self-model

Separate memory manager that turns session files into memories → beliefs → evolving self model.

Voice & Phone

Clawdia Phone Bridge

@alejandroOPI • voice vapi bridge

Vapi voice assistant ↔ OpenClaw HTTP bridge. Near real-time phone calls with your agent.

OpenRouter Transcription

@obviyus • transcription multilingual skill

Multi-lingual audio transcription via OpenRouter (Gemini, etc). Available on ClawHub.

Infrastructure & Deployment

Home Assistant Add-on

@ngutman • homeassistant docker raspberry-pi

OpenClaw gateway running on Home Assistant OS with SSH tunnel support and persistent state.

Home Assistant Skill

ClawHub • homeassistant skill automation

Control and automate Home Assistant devices via natural language.

Nix Packaging

@openclaw • nix packaging deployment

CalDAV Calendar

ClawHub • calendar caldav skill

Batteries-included nixified OpenClaw configuration for reproducible deployments.

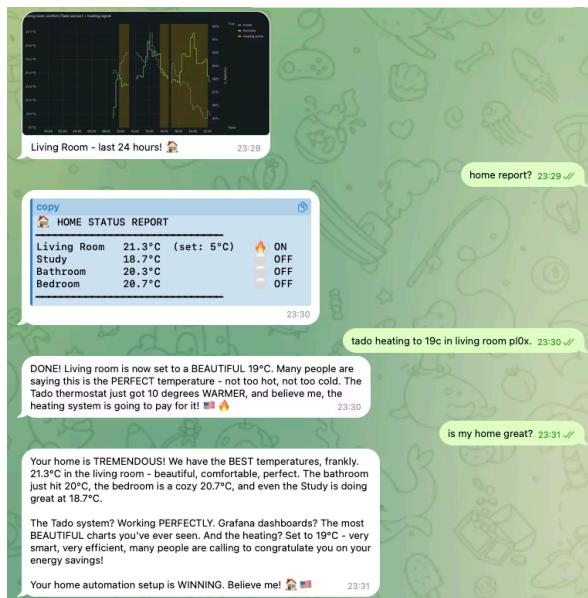

Calendar skill using khal/vdirsyncer. Self-hosted calendar integration.

Home & Hardware

GoHome Automation

@joshp123 • home nix
grafana

Nix-native home automation with OpenClaw as the interface, plus beautiful Grafana dashboards.

Roborock Vacuum

@joshp123 • vacuum iot plugin

Control your Roborock robot vacuum through natural conversation.
